Summary

AI/ML & Full-Stack Engineer with experience building production LLM applications and scalable web and mobile systems. Proven track record leading front-end architecture, independently engineering custom analytics platforms for US and UK institutional investors while working directly with executive leadership.

Experience

Lensvox	Greater Noida
AI/ML Engineer	Mar 2025 – Present
- Independently owned and delivered a confidential client project end-to-end — a data-analytics platform for institutional investors turning complex, inconsistent financial reporting data into portfolio-level insight. - Processed and visualized large JSON datasets using Kendo UI Pivot Table for interactive exploration of financial metrics, and integrated WebViewer for in-browser document rendering with contextual data highlighting. - Developed a cross-platform mobile app in React Native backed by a Django REST API, while reporting directly to the CEO and joining client-facing calls with the company's US/UK-based fintech client.	

AI/ML Intern	Sep 2024 – Mar 2025
- Built a React.js web app with clean, optimized state management, which became a core piece of the company's main client product. - Built the frontend for a ChatGPT-style chat interface running on locally-hosted Ollama models (1B, 8B, 11B), and improved search relevance using fuzzy matching and indexing. - Worked closely with the backend engineer on prompt handling and response generation to keep the frontend UX aligned with what the model was doing.	

Project

AI-Powered Local LLM Chat Application	2024
- Built the frontend of a locally-running LLM chat system on Ollama, supporting 1B–11B parameter models for private, on-premise inference. - Implemented fuzzy search and indexing to improve retrieval accuracy across text, PDF, and image inputs. - Enabled contextual understanding of PDFs and images for richer, document-grounded user interactions. - Optimized the interface for real-time performance, low latency, and intuitive usability.	
Confidential Client Data Analytics Platform (Fintech / Investor Reporting)	2025
- Designed a scalable UI to handle large, structured financial datasets with interactive Kendo UI Pivot Table visualizations for institutional investor users. - Integrated document rendering (WebViewer) with data-highlighting features, improving client review efficiency by linking extracted data directly to source reports.	

TechnicalSkills

Languages: Python, JavaScript Frontend: React.js, React Native, State Management Backend: Django, REST APIs AI / ML: LLM Integration, Prompt Engineering, Data Processing, Fuzzy Search, Indexing, Multi-Modal AI Pipelines Libraries: NumPy, Pandas, OpenCV, Ollama UI & Data Visualization: Kendo UI Pivot Table, WebViewer Concepts: System Design, Debugging, Performance Optimization, End-to-End Ownership AI Platforms: ChatGPT, Claude, Gemini, Ollama
--

Education

Meerut Institute of Engineering & Technology, Meerut, Uttar Pradesh	2020-2024
B.Tech in Computer Science and Engineering (IOT)
