

Meghana Singh

AI/ML Engineer | Full-Stack Developer (React.js, React Native, Django)

Greater Noida, Uttar Pradesh, India | +91 7355184217 | simeghana554@gmail.com

linkedin.com/in/meghana-singh30 | github.com/meghanasingh

PROFESSIONAL SUMMARY

AI/ML and full-stack engineer with 2+ years of experience building production LLM applications and scalable web and mobile systems. Skilled in React.js and React Native front-end architecture, Django REST API development, and locally hosted LLM inference with multimodal retrieval across text, PDF, and image inputs. Delivered a financial data-analytics platform end to end, from data normalization through interactive visualization and production release.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), HTML5, CSS3, SQL

Frontend: React.js, React Native, component architecture, state management (Redux/Context), hooks, responsive UI, cross-platform iOS/Android

Backend: Django, Django REST Framework, REST API design, authentication, server-side data processing

AI/ML: LLM integration, prompt engineering, Ollama local inference (1B-11B parameter models), document-grounded retrieval (RAG), multimodal text/PDF/image pipelines, fuzzy search, search indexing, ChatGPT, Claude, Gemini

Data & Libraries: NumPy, Pandas, OpenCV, large-scale JSON parsing, data normalization and transformation

Data Visualization: Kendo UI PivotTable, WebViewer document rendering, multi-dimensional drill-down and aggregation

Engineering Practices: System design, API contract definition, performance optimization, debugging, Git, Agile delivery, end-to-end ownership

PROFESSIONAL EXPERIENCE

Lensvox — Greater Noida, India

AI/ML Engineer | March 2025 - Present

- Delivered a financial data-analytics platform end to end, converting inconsistent multi-source reporting data into a normalized schema that powers portfolio-level analytics for institutional investors.
- Built the data-processing layer that parses, validates, and transforms large JSON datasets into visualization-ready structures.
- Engineered interactive Kendo UI PivotTable views supporting multi-dimensional drill-down, filtering, sorting, and aggregation of financial metrics.
- Integrated WebViewer for in-browser document rendering with contextual highlighting that links each extracted data point back to its exact location in the source report.
- Developed a cross-platform React Native mobile application backed by Django REST Framework APIs, implementing token-based authentication, shared state management, and a single codebase for iOS and Android.
- Defined API contracts and data models with the backend team, translating requirements into technical specifications and release-ready features.

AI/ML Engineer Intern | September 2024 - March 2025

- Built a React.js web application with optimized state management and reusable component architecture that became a core module of the flagship client product.
- Developed the front end for a ChatGPT-style conversational interface running on locally hosted Ollama models (1B, 8B, and 11B parameters), including conversation state, model switching, and streamed response rendering.
- Implemented fuzzy matching and search indexing to improve retrieval relevance and accuracy across text, PDF, and image content.
- Collaborated with backend engineers on prompt construction and response handling to align front-end behavior with model output and latency.

PROJECTS

AI-Powered Local LLM Chat Application | 2024

React.js, Ollama, Prompt Engineering, Multimodal AI

- Built the front end for an on-premises LLM chat system running on Ollama with 1B-11B parameter models, keeping all inference local with no external API calls.
- Implemented fuzzy search and indexing across text, PDF, and image inputs, enabling document-grounded responses with real-time streaming output and low latency.

Financial Reporting Analytics Platform (Fintech) | 2025

React.js, Kendo UI PivotTable, WebViewer, Data Visualization

- Designed a scalable UI for exploring large, structured financial datasets through interactive pivot-table visualizations, with document rendering and data highlighting that links extracted values directly to their source reports.

EDUCATION

B.Tech, Computer Science and Engineering (Internet of Things)

Meerut Institute of Engineering & Technology, Meerut, Uttar Pradesh | 2020 - 2024 | Graduated second in the CSE (IoT) cohort
